

LIFE IN THE MACHINE

The new digital generation is here. From Packard Bell come desktops and notebooks with sharp looks, optimum power, instant web connectivity and the latest multimedia features. Go plug and play

CHROM@

"Remember, you look with your eyes, not your hands," warned *Front* magazine when describing Packard Bell's Chrom@ notebook. Unashamedly good-looking, the Chrom@ is a lifestyle laptop for the new, design-conscious generation of technophiles. Super-slim, its sleek, metallic exterior and transparent keyboard belie powerful processing features, instant web connectivity and a sophisticated home entertainment system inside. A 700MHz mobile Intel Pentium III processor, 18GB hard drive and 128MB of RAM provide a power-rich platform for the

multimedia features of the Chrom@. Watch DVD movies on the crystal-clear 15-inch TFT screen, connect your Chrom@ to the TV or play your favourite 3D games wherever you go. Listen to CDs in stereo via six Yamaha speakers or play the producer with the integrated audio editing suite. A built-in modem, bundled email account and the latest browsers and plug-ins allow you to access the all-singing, all-dancing web instantly and for free*. And with 30 top-selling software titles included, you really can plug and play as soon as you flip open the lid.

* Excluding local call charges to access the service
